

# INJECTION WAXES

JPL WAXES ARE USED TO REPRODUCE HIGH QUALITY WAX PIECES OR PATTERNS EFFICIENTLY, WITH THE BEST SURFACE FINISH AND SHINE WHICH IS NOW DEMANDED BY THE JEWELLERY MANUFACTURING INDUSTRY.

## THE ADVANTAGES OF USING JPL WAXES...

- Comprehensive range of waxes and colours for all jewellery applications
- Premium quality waxes for producing the finest quality wax pieces or patterns
- Superior surface finish on wax pieces and patterns for enhanced casting results
- JPL waxes suitable for fine filigree work, intricate detail and stone in place wax setting.
- Minimum shrinkage and low ash content for cleaner burnout properties
- JPL range suitable for use in hot climate

JW68 wax is a formulation which is suitable for most jewellery designs. This product has a balanced set of characteristics for the most demanding wax applications, with good flow, low shrinkage and easy to remove. This wax is available in several colours - Please enquire for more information.

## TECHNICAL DATA

Flow (cPs)	Medium/High
Flexibility (N)	Medium
Solidification Point (°C)	63
Linear Shrinkage (%)	2.1
Injection Temp (°C)	70
